

THE COST OF OWNERSHIP

The expense and risk of maintaining outdated circuits

Equipment

Legacy equipment is less efficient, more prone to failure, and limits customer service opportunities. Inactive ports and IPs require capacity to be purchased.

Infrastructure & Space

Outdated equipment requires considerably more real estate, cooling, and power. The environmental and financial costs of colo/data centers are ever-increasing.

Maintenance & Support

Legacy networks force staff to maintain tribal knowledge for end-of-life equipment and create inefficiencies for providing support to legacy customers.

Outages

Outdated equipment is more difficult to restore due to limited availability of skilled personnel, multiple points of failure, and often the only option is replacement.

MAINTAINING OUTDATED CIRCUITS CAN BE EXPENSIVE AND RISKY

...but migrating them doesn't have to be

Try Fully-Managed Circuit Migration

[Wicresoft's Circuit Migration](#) program assists clients with collapse, consolidation, and migration of legacy networks to strategic investment networks and platforms. Eliminate costs associated with infrastructure, maintenance, and equipment for end-of-life technology.
